DOCUMENTS

Criterion7-Institutional Values and Best Practices

Key Indicator - 7.1 Institutional Values and Social Responsibilities

7.1.3 Quality audits on environment and energy regularly undertaken by the Institution

7.1.3 Quality audits on environment and energy regularly undertaken by the Institution.

The institutional environment and energy initiatives are confirmed through the following

- 1. Green audit / Environment audit
- 2. Energy audit
- 3. Clean and green campus initiatives
- 4. Beyond the campus environmental promotion activities

Sr. No.	Title of Document	Page No.
1	Green audit / Environment audit	3-26
2	Energy audit	27-73
3	Clean and green campus initiatives	74-84
4	Beyond the campus environmental promotion activities	85-94

I hereby certify that the information furnished in the document is verified and correct.

ENVIRONMENT AUDIT REPORT

Shri Shivaji Arts and Commerce College , Amravati

Address: Morshi Road, Shivaji Nagar, Amravati, Maharashtra 444603

Audit conducted by: Cue-Biz Marketing and Consulting India Pvt.Ltd.

Audit Date: 26/11/21

About Environment Management Audit

Environmental auditing promotes financial savings through reduction of resource use. It gives an opportunity for the development of ownership, personal and social responsibility for the students and teachers. Thus it is imperative that the college evaluate its own contributions toward a sustainable future.

As environmental sustainability is becoming an increasingly important issue for the country, the role of higher educational institutions in relation to environmental sustainability is more important.

The periodic review of your campus environmental performance allows you to identify and remedy potential compliance concerns and other longer-term concerns (issues requiring some form of clean up and/or remediation)

An environmental audit and corrective action plan will help you maintain environmental compliance throughout your supply chain and protect your institutes reputation. Ensure that the companies institutes you work with are operating legally under local laws and ISO 14001 best practices, and reinforce your image as an environmentally-conscious institute.

The ISO 14001 family of standards includes:

- Legal requirements and risk assessment
- Environmental management system
- Solid and hazardous wastes
- Waste water
- Air emissions
- Nuisance
- Energy use, water use, CO2 emissions

About Shri Shivaji Arts and Commerce College:

Shri Shivaji College Amravati, Dist. Amravati run by Shri Shivaji Education Society, Amravati was started in 1946. This is the first college started by the founder President of the Parent Society Dr. Panjabrao alias **Bhausaheb Deshmukh**, who was the Ex-Agriculture Cabinet Minister of Independent India.

Shri Shivaji College, Amravati, started in 1946 with faculty of **Arts, Commerce and faculty of Law**. In the year 1956 Post Graduate in Commerce started. **Post Graduate course** in **Economics** was started in 1972-73, **Post Graduate** course in **Political Science & English** in 1980-81. From the year 1981-82 **M.Phil. Economics and Commerce** were started.

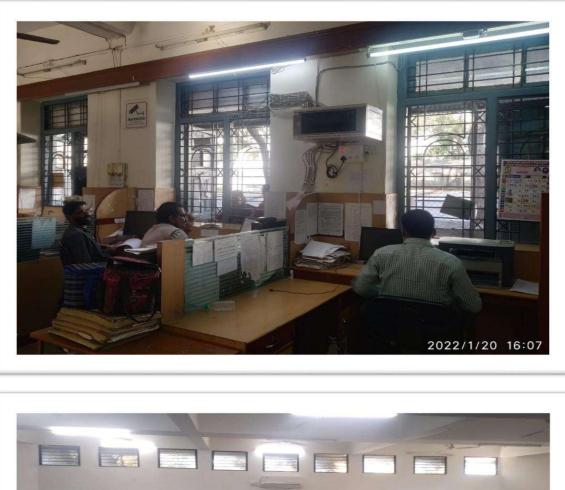

The college started **Bachelor of Mass Communication** course in 2001-02 and in the year 2003-04 Master of Mass Communication was started. **M.A. Geography, M.A. Economics** and **B.A. Music** started from the academic year 2007-08.

Shri Shivaji College is re-accredited with **A grade by NAAC**; Bangalore in 2017 with CGPA of 3.08. The College has beautiful green campus of **6.2.Acres** situated on Nagpur State Highway. The college offers career oriented courses in **Communication skill in English**, **Television & Video Production and GIS & Remote Sensing**.

The college endeavors to offer qualitative higher education to all the sections of society, which was the dream and mission of Late Dr. Panjabrao Deshmukh.

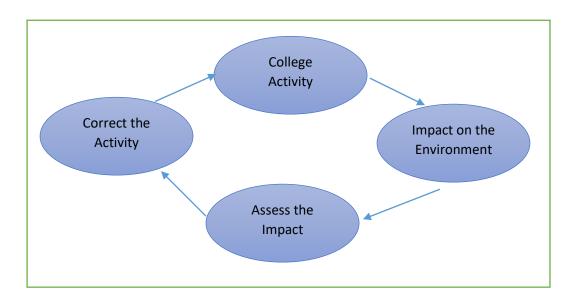

Objectives of the Audit:

Environmental auditing is a process whereby an organization's environmental performance is tested against its environmental policies and objectives.

- Environmental education through systematic environmental management approach
- Improving environmental standards
- Benchmarking for environmental protection initiatives
- Sustainable use of natural resource in the campus.
- Financial savings through a reduction in resource use
- Development of ownership, personal and social responsibility for the College campus and its environment
- Enhancement of College profile
- Developing an environmental ethic and value systems in young minds.

Auditor: Mr. Abhijeet Moraskar

Lead Auditor ISO 14001:2015 Environment Management System.

Cue Biz Marketing and Consulting India Pvt.Ltd.

Auditee: Dr. R.M Bhise

Principal

Shri Shivaji Arts and Commerce College.

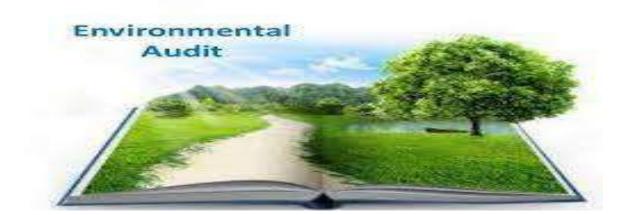

Benefits of the Audit:

- Facilitating comparison and interchange of information between operation or plants.
- Increasing employee awareness of environmental policies and responsibilities.
- Identifying cost-savings including those resulting from waste minimization.
- Evaluating training programmes and providing data to assist in training personnel.
- Providing an information base for use in emergency response arrangements.
- Assuring an adequate, up-to-date environmental database for internal management awareness and decision making in relation to plant modifications, new plans, etc.
- Helping to assist relations with authorities by convincing them that complete and effective audits are being undertaken, by informing them of the type of procedure adopted.

EMS Findings of the Audit:

Sr. No.	Audit Findings
1	Green Area in college premises is 12000 sq.ft. and is effectively maintained
2	Tree Plantation is effectively followed as currently 400 nos. of trees are maintained in premises.
3	College effectively monitors Water Consumption in premises and data shows its 4000 Ltrs.
4	Emergency Preparedness Plan is evident.
5	Waste Management system is effectively defined and followed in college premises
6	Recycling activities are followed in College Premises e.g:-Paper consumption monitoring is effectively followed and relevant controls are defined for reduction of same
7	Mock Drills are conducted in college premises.
8	Institute effectively monitors Community concerns as there has been no complaints by any neighboring institutions
9	Institute focusses on reduction Electricity Consumption through LED Bulbs usage and along with it focus is towards natural lights usage
10	 Institute focusses on monitoring of all following details :- Hazardous Waste Generation – No waste Generated Ventilation Surveys Conducted- Yes DG Noise – Yes Illumination Survey – Yes E waste Generation – Yes. Drinking Water testing – Yes on frequent basis
11	STP is not available in institute and water waste is drained in drainage system

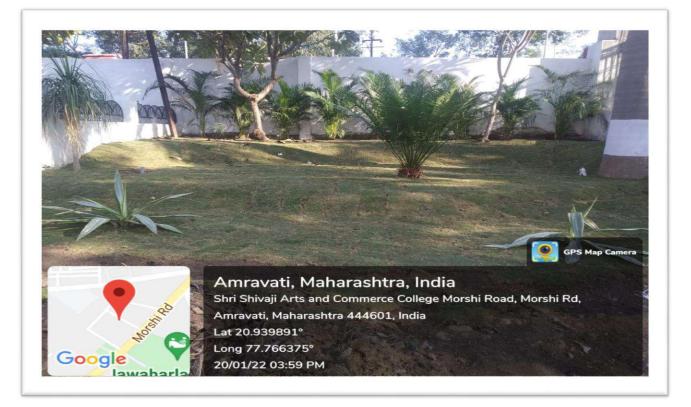

Classrooms having proper ventilation and illumination.

Green area in the campus.

Recommendations:

- Plant more trees in order to keep the air quality clean.
- Emergency preparedness plan for all types of disasters to be made evident at different visible locations to generate an awareness among students and staff members.
- Environment Day, earth Day, Ozone day to be celebrated in institute to create awareness.
- Legal register to be maintained.
- Paper consumption reduction programmes to be taken through usage of digital platforms.
- Feasibility for installing sewage treatment plant (STP) to be verified.
- ISO 14001:2015 (Environmental Management System) to be implemented.
- ISO 21001:2018 (Educational Organization Management System) to be implemented.

Auditor Signature:

Abfigeet Morosfor

About Cue-Biz:

Cue-Biz is an Exemplar Global recognized training provider. **Exemplar Global** is a part of ASQ, and you may know them by their former name, RABQSA.

Cue-Biz Courses accredited by Exemplar Global:

Various Lead Auditor Courses for Business Management System such as **ISO 9001, ISO 14001, ISO 45001, IATF 16949:2016, ISO 50001, ISO 22000, ISO 27001, ISO 13485, ISO/IEC 17025, ISO 21001** etc....

Cue Biz is a **management system consulting firm** which supports institution and organizations for implementing and improving various management systems through training, auditing and consulting Services.

Cue Biz Conducts **Environmental Testing's** for organizations and provide them with MOEF approved reports.

Cue Biz provides **soft skill trainings** for **Prevention of Sexual harassment (POSH)**. **Communication and presentation skills, Stress Management, Time Management** etc.

GREEN AUDIT ASSESSMENT REPORT

SHRI SHIVAJI ARTS AND COMMERCE COLLEGE

Address: Morshi Road, Shivaji Nagar, Amravati, Maharashtra 444901, India.

JULY 2021

Conducted By PPS Energy Solutions Pvt. Ltd.

Engineering Consultants

Plot No-18, Girish Housing Society Warje, Pune – 411058, Maharashtra, India.

GREEN AUDIT REPORT

1. About Green Audit

Green Audit is a process of systematic identification, quantification, recording, reporting and analysis of components of environmental diversity of various establishments. It aims to analyze environmental practices within and outside of the concerned sites, which will have an impact on the eco-friendly ambience.

Green audit can be a useful tool for a college to determine how and where they are using the most energy or water or resources; the college can then consider how to implement changes and make savings. It can also be used to determine the type and volume of waste, which can be used for a recycling project or to improve waste minimization plan. It can create health consciousness and promote environmental awareness, values and ethics. It provides staff and students better understanding of Green impact on campus. If self enquiry is a natural and necessary outgrowth of a quality education, it could also be stated that institutional self enquiry is a natural and necessary outgrowth of a quality educational institution. Thus it is imperative that the college evaluate its own contributions toward a sustainable future. As environmental sustainability is becoming an increasingly important issue for the nation, the role of higher educational institutions in relation to environmental sustainability is more prevalent.

The rapid urbanization and economic development at local, regional and global level has led to several environmental and ecological crises. On this background it becomes essential to adopt the system of the Green Campus for the institutes which will lead for sustainable development and at the same time reduce a sizable amount of atmospheric carbon-di-oxide from the environment. The National Assessment and Accreditation Council, New Delhi (NAAC) has made it mandatory that all Higher Educational Institutions should submit an annual Green Audit Report. Moreover, it is part of Corporate Social Responsibility of the Higher Educational Institutions to ensure that they contribute towards the reduction of global warming through Carbon Footprint reduction measures.

In recent time, the Green Audit of an institution has been becoming a paramount important for self assessment of the institution which reflects the role of the institution in mitigating the present environmental problems. Many institutions undertake lot of good measures to resolve these problems but are not documented due to lack of green documentation awareness. All this non-scholastic efforts of the administrations play an important role in ensuring the green quotient of the campus is intact.

Therefore, the purpose of the present green audit is to identify, quantify, describe and prioritize framework of Environment Sustainability in compliance with the applicable regulations, policies and standards.

2. Objectives

Main Objectives of Green Audit :

1. Geographica Location

,

- 2. Floral and Faunal diversity
- 3. Meteorological parameter
- 4. Energy Consumptions
- 5. Waste disposal system
- 6. Ambient Environmental Condition
- 7. To avoid the interruptions in environment that are more difficult to handle and their correction requires high cost.
- 8. Awarness & Training on Sustainability for Students

3. Benefits

- > It would help to prepare plan to protect the environment.
- > Recognize the cost saving methods through waste minimization and management.
- > Point out the prevailing and forthcoming impacts on environment.
- > Ensures conformity with the applicable laws.
- > Empower the organizations to frame a better environmental performance.
- > It portrays a good image of an institute which helps building better relationships with

the group of interested parties.

> Promotes the alertness for environmental guidelines and duties.

4. Green Audit Constitution

Constitution For Green Audit :-

,

The Green Audit is carried out as per the environmental policy of the Shri Shivaji Arts and Commerce College, Amravati and Green audit checklist. The aim of the audit is to check the existing practices and provide advice for the development of environmental policy and practice in the areas of:

- ➢ Waste Management
 - i. Solid waste management
 - ii. E-waste management
- Water conservation and management
- ➢ Tree plantations
- > Bio-diversity and threatened endangered species preservations
- Energy use and conservations
- ➢ Eco-friendly campus
- Green environment and clean campus

5. Executive Summary

The rapid urbanization and economic development at local, regional and global level has led to several environmental and ecological crises. On this background it becomes essential to adopt the system of the Green Campus for the institute which will lead for sustainable development. Shri Shivaji Arts and Commerce College, Amravati, is deeply concerned and unconditionally believes that there is an urgent need to address these fundamental problems and reverse the trends. Being a premier institution of higher learning, the college has initiated 'The Green Campus' program two years back that actively promote the various projects for the environment protection and sustainability.

The purpose of the audit was to ensure that the practices followed in the campus are in accordance with the Environmental Policy adopted by the institution. The methodology include: preparation and filling up of questionnaire, physical inspection of the campus, observation and review of the documentation, interviewing key persons and data analysis, measurements and recommendations. It works on the several facets of 'Green Campus' including Water Conservation, Tree Plantation, Waste Management, Paperless Work, Alternative Energy and Mapping of Biodiversity. With this in mind, the specific objectives of the audit are to evaluate the adequacy of the management control framework of environment sustainability as well as the degree to which the Departments are in compliance with the applicable regulations, policies and standards. It can make a tremendous impact on student health and learning in the college and the environment. The criteria, methods and recommendations used in the audit were based on the identified risks.

6. Observations & Recommondations

OBSERVED POINTS

1. College has prepared Green Environmental policy and has taken efforts for sustainable development on the college campus.

2. College has formed the team of faculty and student which works to maintain biodiversity on the campus and also participates in preventing pollution in society through various drives during different festivals, etc.

3. College has a system of Hazardous waste disposal through authorized agency.

4. College has conducted Environment. Awareness trainings and workshop for faculty and students.

RECOMMENDATIONS

1. College should go for ISO 14001:2015 certification

2. College should install ETP and STP plants.

3. More number of Energy and flow meters to be installed for monitoring of energy and water consumption building wise/department wise.

4. PUC certificate for all the vehicles entering the campus to be made mandatory and to be checked by security.

5. College should maintain the legal register for the applicable environment related regulations and comply with this as per the requirement.

6. Bio-waste: Composting system to be adopted.

7. College has to install solar panels.

7. Overall Recommendations

- 1) Lab waste water quantity is not measured and drained to municipal drainage system.
- 2) Solid waste segregation is not done in lab as well as store room before final disposal.
- 3) Planning of chemical consumption and purchase to be ensured.
- 4) Calibration of instrument in lab to be done.
- 5) Composting of bio degradable waste to be scientifically done.
- 6) Septic tank sewage water analysis is to be done.
- 7) Plan for green belt development to be prepared.
- 8) Drinking water analysis shall be done as per IS 10500.
- 9) Rain water Harvesting (RWH) is to be done technically.
- 10) Reduction of wood policy.
- 11) Department wise electrical load consumption is to be done.
- 12) Energy used by each appliance is to be estimated.
- 13) List of equipment/instrument and their consumption of (energy/water) is to be estimated.
- 14) Awareness for energy and water conservation among students and staff by displaying boards.
- 15) Automatic leak detections in water flowing pipeline
- 16) Water usage reduction techniques to be used.
- 17) No previous for disposal of sanitary napkins. As per the Biomedical waste disposal Act.
- 19) Tree plantation shall be done to maintain biodiversity as well as artificial nesting shall be installed.
- 20) D. G. stack monitoring/Exhaust gas analysis shall be done.
- 21) Awareness among students and staff about green environment shall be done use tools like display boards.

,

ENERGY SAVING UTILITY DATA

,

Summary of Recommended Energy Conservation Measures:

Sr.No.	ECM Details	Investmen t(Rs. In Lacs)	Savings (kWh/yea)	Carbo n credit (Tons of Co2)	Savin g (Rs.In Lacs /Year)	Paybac k (Years)
1	Optimize the temperature setting to 23-25 degree Celsius	0.00	317.52	0.28	0.02	0.00
2	Replacement of conventional lights with suitable LEDs	0.84	6446.88	5.48	0.36	2.34
3	Replacement of existing fans with energy efficient Super fans	1.94	5544.00	4.71	0.31	6.24
	Total	2.78	12308.40	10.48	0.69	4.03

Note: Estimated savings may base on operating conditions

About PPSES

M/s. PPS Energy Solutions Pvt. Ltd (PPSES) is an ambitious company, established by enterprising engineering professionals in the year 2009. The company offers services pertaining to Energy and Engineering to clients across the globe. Our team is based in Pune, a city known for its Software and Engineering talent in India. We are a rapidly growing company with a team of about 100 people which includes highly trained and experienced Techno-Managers, Analysts, and Engineers & Detailers.

We are presently working in India (Maharashtra, Assam, Madhya Pradesh, Gujarat, Andhra Pradesh, Delhi, Orissa, Chhattisgarh, Bihar, Andhra Pradesh, Telangana and Jharkhand) and Abroad (Bahrain, Stanford)

PPSES Team Members Name	Role	Academics and Expertise
Dr. Ravi Deshmukh	ECM verification, Report verification and presentation	Accredited Energy Auditor PhD, M tech, MBA (Power), Graduate E&TC Engineer with over 18 years of experience in Energy Management, Management of Power System, street light projects, Power Exchange Operations, Power Trading and Analysis, Electrical Automation. Has worked as Expert in Iron & Steel sector and Energy
Mr .Nilesh Saraf	Co-ordination with officers, project status review.	Expert in Energy sector with 16 years of experience in Energy efficiency assessment, Industrial engineering sector & Renewable Energy.
Mr. Vinayak Apte	Energy Audit Expert	Graduate Electrical Engineer with more than 10 years of experience in various sectors. He handled Energy Audits, Energy Conservation and Energy Efficiency projects in Industries, Commercial and Residential Buildings, Pump House
Mr. Vedmurthy Swamy	Field study, data tabulation and analysis, report preparation	Graduate Mechanical Engineer with 5 years of experience in project management, energy efficiency assessment

Dr. Ravi G. Deshmukh Energy Auditor Class - A MEDA/ECNCR-05/2018-19/EA-05

MAHARASHTRA ENERGY DEVELOPMENT AGENCY Maharashtra Energy Development Agency

Maharashtra Energy Development Agency (Government of Maharashtra Institution) Aundh Road, Opposite Spieer College Road, Near Commissionerate of Animal Husbandary. Aundh, Pune, Maharashtra 411067 Ph No: 020-35000450 Email: <u>eee@mahaurja.com</u>. Web: <u>www.mahaurja.com</u>

ECN/2021-22/CR-28/3412

06th July, 2021

CERTIFICATE OF REGISTRATION FOR CLASS 'A'

We hereby certify that, the firm having following particulars is registered with MAHARASHTRA ENERGY DEVELOPMENT AGENCY (MEDA) under given category as "Energy Planner & Energy Auditor" in Maharashtra for Energy Conservation Programme of MEDA.

Name and Address of the firm	 M/s PPS Energy Solutions Pvt. Ltd. B-403, Bharat Vihar, S.No-78. Bharti Vidyapith, Compus. Katraj, Pune-411043. 				
Registration Category	: Empanelled Consultant for Energy Conservation Programme for Class 'A'				
Registration Number	: MEDA/ECN/2021-22/Class A/EA-11				

- Energy Conservation Programme intends to identify areas where wasteful use of energy occurs and to evaluate the scope for Energy Conservation and take concrete steps to achieve the evaluated energy savings.
- MEDA reserves the right to visit at any time without giving prior information to verify quarterly activities performed by the firm and canceling the registration, if the information is found incorrect.
- This empanelment is valid till 05th July, 2023 from the date of registration, to earry out energy audits under the Energy Conservation Programme
- The Director General, MEDA reserves the right to cancel the registration at any time without assigning any reasons thereof.

General Manager (FC)

PREFACE

Energy Audit is a key parameter of systematic approach for decision-making in the area of energy management. It attempts to determine how and where energy is used and to identify methods for energy savings. There is now a universal recognition of the fact that new technologies and much greater use of some that already exists provide the most hopeful prospects for the future. The opportunities lie in the use of existing renewable energy technologies, greater efforts at energy efficiency and the dissemination of these technologies and options.

As per the Energy Conservation Act, 2001, Energy audit is defined as "the verification, monitoring and analysis of use of energy including submission of technical report containing recommendations for improving energy efficiency with cost benefit analysis and an action plan to reduce energy consumption".

Present audit is a mare mile marker towards destination of achieving safe, healthy and energy efficient unit. We would like to emphasize that an electrical audit is a continuous process. We have compiled a list of possible actions to conserve and efficiently utilize our scarce resources and identified their savings potential. The next step would be to prioritize their implementation. Implementation of recommended measures can help consumes to achieve significant reduction in their energy consumption levels.

WHY ENERGY AUDIT?

An energy audit determines the amount of energy consumption affiliated with a building and the potential savings associated with that energy consumption. Additionally, an energy audit is designed to understand the specific conditions that are impacting the performance and comfort in your facility to maximize the overall impact of energy-focused building improvements.

An energy audit is a systematic review of the energy consuming installations in a building or premises to ensure that energy is being used sensibly and efficiently. An energy audit usually commences with the collection and analysis of all information that may affect the energy consumption of the building or premises, then follows with reviewing and analyzing the condition and performance of various building services installations and building management, with an aim at identifying areas of inefficiency and suggesting means for improvement.

Through implementation of the suggested improvement measures, building owners can get the immediate benefit for paying less for energy bills. On the other hand, lowering of energy consumption in buildings will lead to the chain effect that less fossil fuel will be burnt for electricity generation by the power supply companies and relatively less pollutants and greenhouse gases will be introduced into the atmosphere, thus contributing to conserve the environment and to enhance sustainable development.

ACKNOWLEDGEMENT

We express our sincere gratitude to the authorities of Shri Shivaji Arts & Commerce College, Amravati for entrusting and offering the opportunity. It is our immense pleasure to present the detailed report on energy assessment.

We acknowledge the support from management for their positive support in undertaking the task of energy efficiency assessment of all electrical system, thermal systems, utilities and other area and for continuous help and support before and during the audit.

We are also thankful to all field staff and agencies working with whom we interacted during the field studies for their wholehearted support in undertaking measurements and eagerness to assess the system / equipment performance and saving potential. We admire the help of all concerned staff for their active participation in completing official documentations.

We express our sincere gratitude to the authorities of Shri Shivaji Arts & Commerce College, Amravati for entrusting PPS Energy Solutions Pvt. Ltd.

For PPS Energy Solutions Pvt. Ltd.

PPS Energy assumes no responsibility and shall not be liable to any person for any loss, damage or expense caused by reliance on the information or advice in this document or howsoever provided, unless that person has signed a contract with the relevant PPSES entity for the provision of this information or advice and in that case any responsibility or liability is exclusively on the terms and conditions set out in that contract.

About PPSES

M/s. PPS Energy Solutions Pvt. Ltd (PPSES) is an ambitious company, established by enterprising engineering professionals in the year 2009. The company offers services pertaining to Energy and Engineering to clients across the globe. Our team is based in Pune, a city known for its Software and Engineering talent in India. We are a rapidly growing company with a team of about 100 people which includes highly trained and experienced Techno-Managers, Analysts, and Engineers & Detailers.

We are presently working in India (Maharashtra, Assam, Madhya Pradesh, Gujarat, Andhra Pradesh, Delhi, Orissa, Chhattisgarh, Bihar, Andhra Pradesh, Telangana and Jharkhand) and Abroad (Bahrain, Stanford)

- ➢ We serve in majorly four areas,
 - Energy Audit, Management and System Evaluations
 - Power Distribution System Design, Evaluations and Monitoring
 - MEP Design and Project management
 - Research and Training

PPSES Team Members

Name	Role	Academics and Expertise			
Dr. Ravi Deshmukh	ECM verification, Report verification and presentation	Accredited Energy Auditor PhD, M tech, MBA (Power), Graduate E&TC Engineer with over 18 years of experience in Energy Management, Management of Power System, street light projects, Power Exchange Operations, Power Trading and Analysis, Electrical Automation. Has worked as Expert in Iron & Steel sector and Energy			
Mr .Nilesh Saraf	Co-ordination with officers, project status review.	Expert in Energy sector with 16 years of experience in Energy efficiency assessment, Industrial engineering sector & Renewable Energy.			
Mr. Vinayak Apte	Energy Audit Expert	Graduate Electrical Engineer with more than 10 years of experience in various sectors. He handled Energy Audits, Energy Conservation and Energy Efficiency projects in Industries, Commercial and Residential Buildings, Pump House			
Mr. Vedmurthy Swamy	Field study, data tabulation and analysis, report preparation	Graduate Mechanical Engineer with 5 years of experience in project management, energy efficiency assessment			

1. EXECUTIVE SUMMARY

Detailed Energy Audit was undertaken in order to evaluate energy performance and identify potential energy conservation measures. The assessment was undertaken in three steps, i.e. document review of data and information initially provided by facility, site visit and preparation of this report.

The building visit was conducted by energy audit team. The site visit included interaction with staff, electricians of building, the collection/review of further data and a field inspection of the facilities and equipment.

The salient observations and recommendations are given below.

- 1. The Total Cost of Energy is around **Rs. 2,76,617**/- per Annum
- 2. Average monthly units consumed are 14,291 kWh equivalent to Rs. 23,051/-
- 3. Average electricity charges works out to be Rs. 5.6/-

This brief report has therefore sought to provide a high-level overview of the status of energy efficiency at building, combined with an illustration of areas where further, previously unidentified savings opportunities may exist.

Our survey has identified further potential opportunities, ranging from "no & low cost" measures, through to those that will require significant capital expenditure.

Note: Investment figures mentioned in are only indicative, further detailed study is recommended.

Sr.No.	ECM Details	Investment (Rs. In Lacs)	Savings (kWh/year)	Carbon credit (Tons of Co2)	Saving (Rs.In Lacs /Year)	Payback (Years)
1	Optimize the temperature setting to 23-25 degree Celsius	0.00	317.52	0.28	0.02	0.00
2	Replacement of conventional lights with suitable LEDs	0.84	6446.88	5.48	0.36	2.34
3	Replacement of existing fans with energy efficient Super fans	1.94	5544.00	4.71	0.31	6.24
Total		2.78	12308.40	10.48	0.69	4.03

Summary of Recommended Energy Conservation Measures:

Note: Estimated savings may base on operating conditions

During the Energy Audit, Total Estimated Investment of Rs.2,78,060/- yields Total Estimated Savings of Rs. 68,927/- which 25 % of the Total Energy Cost of Rs. 2,76,617/- with an overall payback period of 4.03 years.

Other Recommendations:

- A. Regular cleaning and maintenance of equipment's is important to reduce energy losses.
- B. Use of start rated equipment's is also strongly recommended specially in case of Fans and Air conditioning.
- C. Cleaning of ceiling fan and exhaust fan blades will reduce the drag on the fan and intern will reduce energy loss.
- D. Awareness amongst students and staff is very essential step to reduce wastage of electricity
- E. Energy conservation awareness programs can be conducted once a year. Increasing energy awareness of employees and students motivates them to work as a team can lead to reductions in energy consumption and save the money.

Year	Investment (Rs. In Lacs)	Saving (Rs.In Lacs /Year)	Cum Savings(Rs Lakh)	Net savings (Rs Lakh)
0	-2.78	0.00	0.00	-2.78
1	0.00	0.69	0.69	-2.09
2	0.00	0.69	1.38	-1.40
3	0.00	0.69	2.07	-0.71

2. GENERAL AUDIT REVIEW

Building can implement faster payback energy conservation measures (ECMs) which have already been considered and for which the ECMs are fully developed.

Other General Points:

- 1. Energy conservation awareness programs can be conducted once a year. Increasing energy awareness among staff, students and motivating them to work as a team can lead to reductions in energy consumption and save the money. Savings estimates range in the order of 5 to 10%. When implemented effectively these savings can be realized quickly and cost effectively.
- 2. Most of the fans are of older design and not energy inefficient.
- 3. Most of the places the tube light installed are energy efficient and fittings are in healthy condition.
- 4. Natural day light is efficiently used in corridor and few classrooms and labs areas.

It is believed that with the current approach and organization of energy management, energy can be reduced in a systematic, cost effective manner. We hope that this report will help building to implement these changes and provide direction to the Energy Management Team.

3. ABOUT ENERGY AUDIT

Objective

The overall objective of the assignment is to quantify energy saving in existing system and achieve reduction in energy consumption pattern.

Hence the detail objectives are as under,

- 1. To calculate the energy consumption.
- 2. To evaluate the performance of the equipment.
- 3. To find out the energy saving opportunities.
- 4. To quantify the total energy savings.
- 5. To find out the ways to achieve energy efficiency.

3.1. Scope of Work

Following is the scope of work envisaged for this assignment,

Data Collection

To collect the details of various electrical and mechanical system and their ratings, the available drawings and details shall be studied. Detail load list shall be prepared and checked.

A, B, C Analysis

With the details available from load list, analysis shall be carried out depending on the present usage trends. All the power consuming equipment's shall be classified in three categories depending on their ratings, condition and operating time. The area for larger potentials for savings shall be identified.

Field Study

The detail field study on site shall include the following as well as all other measures required for energy audit study,

- a. Lay out the system and study of Electrical distribution.
- b. Study of area wise power distribution and Measurement of power consumption
- c. Study of instrumentation provided
- d. Measurement of motor currents, voltages, power etc. parameters by energy analyzer and measurement of water flow, pressures etc. parameters of pumps simultaneously and other measurements as needed to characterize the system and required for calculating efficiency at various combinations.
- e. Study of air conditioner operations and system requirements.
- f. Analysis of readings obtained from field with the standard consumption.

3.2. Approach and Methodology

- 1. Understanding the Scope of Work and Resource Planning
- 2. Identification of Key Personnel for the assignment/ project
- 3. Structured Organization Matrix
- 4. Steps in preparing and implementing energy audit assignment.
 - a) Discussions with key facility personnel.
 - b) Site visits and conducting "walk-through audit".
 - c) Preliminary Data Collection through questionnaire before audit team's site visit.
 - d) Steps for conducting the detailed audit
 - Plan the activities of site data collection in coordination with the facility incharge.
 - Study the existing operations involving energy consumption
 - Collect and collate the energy consumption data with respect to electricity consumption
 - Conduct performance tests to assess the efficiency of the system equipment/ electricity distribution, lighting, and identify energy losses.
 - Discuss with facility personnel about identified energy losses.
- 5. List proposed efficiency measures
 - Develop a set of potential efficiency improvement proposals
 - Baseline parameters
 - Data presentation
 - System mapping
 - List of potential Energy Savings proposals with cost benefit analysis.
 - Review of current operation & maintenance practices
- 6. Preparation of the Draft Energy Audit Report.
- 7. Preparation and submission of final Energy Audit Report after discussion with concerned persons.

4. ENERGY DETAILS

The electricity supply for building is provided by Maharashtra State Electricity Distribution Company Limited (MSEDCL). Having eight energy meters & one energy meter. Billing is carried out according to LT VII(B)- Tariff & LT-II-Tariff Respectively

Detailed Energy Audit was conducted for the load connected to the mains supply used.

Mainly energy is used on this facility for the following purposes:

- 1) Lighting load
- 2) Ceiling fans
- 3) Air Conditioner

Based on above it is clear that followings buildings have highest potential for energy

savings

5. ENERGY CONSERVATION MEASURES

ECM 1: Replacement of Tube Lights with More Efficient Lights

				Estimated s	aving		
	CM	Energy efficiency improvement	Investment	Electricity	Carbon credit	Estimated Savings	Estimated Payback
No.	measures	Rs. In Lakh	kWh	(Tons of CO ₂)	Rs. In Lacs	Years	
	1	Replacement of Conventional Lights with More Efficient Lights	0.84	6446.88	5.48	0.36	2.34

Observations:

Facility has installed 28W,36W & 40W Tube lights in the buildings

Recommendations:

During energy audit, it is observed that facility has installed 28W,36W & 40W Tube lights at some of the places in the facility The operating hours for these lightings are around 6 hours. 28W,36W & 40W Tube lights can be replaced with the LED lightings thereby achieving significant energy consumption reduction. The 28 W, 36W Tube lights could be replaced in such a manner that it has same fixture so there will not be retrofitting cost attached to the replacement. The replacement could be done in a phased manner. LED lightings have better efficiency as well as better lifetime than 28W,36W & 40W Tube lights.

Energy Saving Calculations:

Particular	Unit	Value			
Energy Saving Calculation					
Power consumption of TL, MV lamps	KW	5.92			
Power consumption of suitable LED	KW	2.66			
Average power saving after replacement with LED	KW	3.26			
Replacement of conventional lights with suitable LEDs	Nos	148.00			
Average working hour per day	hrs	6			
No. of working days in a year	Days	330

3	Optimize The AC Temperature Setting To 23-25 Degree Celsius	0.00	317.52	0.28	0.0178	0.00

ECM 3: Optimize The AC Temperature Setting to 23-25 Degree Celsius

Observations:

During Energy Audit, it is observed that ACs installed in facility run with lower temperature than the recommended temperatures.

Recommendations:

We recommend to keep the set temperature of AC between 23 to 25° C to get the energy saving.

Standard:

It is known that a 1°C raise in AC temperature can help to save almost 3 % on power consumption (this can also be verified in BEE guideline: Chapter 4. HVAC and Refrigeration System).

The TR capacity of the same AC systems will also increase with the increase in evaporator temperature (AC set points), as given in Table below:

Effect of variation in Evaporator Temperature on Compressor Power Consumption							
Evaporator temperature(⁰ C)	Refrigeration Capacity* (tons)	Specific Power Consumption	Increase in kW/ton (%)				
5	67.58	0.81	-				
0	56.07	0.94	16

6. ANNEXURE (SOLAR)

1) Introduction

The solar energy has a great potential as future source of energy. With its availability in large quantity almost in every corner of the country, solar power has the distinctive advantage of generating power at local and decentralized levels and being one of the prime factors for empowering people at grassroots level. The solar mission, which is part of the National Action Plan on Climate change has been set up to promote the development and use of solar energy for power generation and other uses with the ultimate objective of making solar energy competitive with fossil-based energy options. The solar photovoltaic device systems for power generation had been deployed in the various parts in the country for electrification where the grid connectivity is either not feasible or not cost effective as also some times in conjunction with diesel based generating stations in isolated places, communication transmitters at remote locations. With the downward trend in the cost of solar energy and appreciation for the need for development of solar power, solar power projects have recently been implemented. A significant part of the large potential of solar energy in the country could be developed by promoting solar photovoltaic power systems of varying sizes as per the need and affordability coupled with ensuring adequate return on investment.

2) Benefits of Solar Energy

- a. Power from the sun is clean, silent, limitless and free.
- b. Photovoltaic process releases no CO2, SO2, or NO2 gases which are normally associated with burning finite fossil fuel reserves and don't contribute to global warming.
- c. Photovoltaic are now a proven technology which is inherently safe as opposed to other fossil fuel based electricity generating technologies.
- d. Solar power shall augment the needs of peak power needs.
- e. provides a potential revenue source in a diverse energy portfolio
- f. Assists in meeting renewable portfolio standards goals.

This proposal is prepared for design, engineering, procurement / manufacture and installation of solar power generating system. The grid-tie solar photovoltaic power generation system is mainly composed of PV array, String Inverter, and PV mounting structure.

It also consists of supporting devices like AC / DC switchgears, Lighting Arrestor, Earth Electrodes, AC / DC cables. As there is no any battery, it's maintenance cost is negligible and initial investment per KW is very low.

3) Objective

- Provide reliable, clean, regulated, un-interrupted power on demand to the preidentified critical loads
- System to provide low life cycle cost and maximize savings to the beneficiaries.

To save diesel in institutions and other commercial establishments including industry facing huge power cuts especially during daytime.

4) **Design Assumptions**

General

- a. The Solar Radiation Data's are based on standard books & simulation software as NASA and Metronome. The Mean Hourly Radiation Data is considered.
- b. The module rating considered is tentative. The exact module sizing and rating will depend on the availability of cell grade and site suitability.
- c. Solar Panels are roof/ground mounted in one location. Environmentally protected, closed, ventilated, inverter room at minimum distance from PV modules.
- d. Application: Self consumption, captive grid or NET metering.
- e. Emergency Backup: Generator or any other source in absence of Grid.

5) System Description

Solar Power Plant comprises of the main equipment and components listed below:

- 1. Solar PV Modules
- 2. String Inverter with MPPT
- 3. Module mounting system
- 4. Monitoring system
- 5. Cables & connectors

Each of the sub systems has been described for the functionality and operation modes. The physical construction of the system follows a modular approach, which is field-tested and is regularly used for delivery of power systems.

5.1 Solar PV Module (Electrical Features)

The PV modules convert the light reaching them into DC power. The amount of power they produce is roughly proportional to the intensity and the angle of the light reaching them. They are therefore required to be positioned to take maximum advantage of available sunlight within sitting constraints.

5.2 Solar PV Module (Mechanical Features)

Solar Module design will conform to following Mechanical requirements:

- ➤ Toughened,
- ➢ low iron content,
- ➢ High transmissivity from glass.
- Anodized Aluminum Frame.
- Ethyl Vinyl Acetate (EVA) encapsulating.

- > Tedlar/Polyester trilaminate back surface.
- > ABS plastic terminal box for the module output termination with gasket to prevent water & moisture.
- Resistant to water, abrasion hail impact, humidity & other environment of actors for the worst situation at site.

5.3 Module Mounting Structure

The structure shall be designed to allow easy replacement of any module and shall be in line with site requirement. Structure shall be designed for simple mechanical and electrical installation. It shall support SPV modules at a given orientation, absorb and transfer the mechanical loads to the ground properly. There shall be no requirement of welding or complex machinery at site. The array structure shall have tilt arrangement to adjust the plane of the solar array for optimum tilt.

5.4 Junction Box

The junction boxes shall be dust, vermin and waterproof and made of FRP/ABS Plastic with IP65 protection. The terminals shall be connected to copper bus bar arrangement of proper sizes. The junction boxes shall have suitable cable entry points fitted with cable glands of appropriate sizes for both incoming and outgoing cables. Suitable marking shall be provided on the bus bar for easy identification and cable ferrules shall be fitted at the cable termination points for identification

5.5 String Inverter

The STRING INVERTER is A combination of Solar Charger (MPPT), Inverter and synchronization unit for two different AC supplies, all housed in a single unit. Maximum power point tracker (MPPT) shall be integrated into it to maximize energy drawn from the solar array. The Inverter converts the DC available from the array into an AC output. The output of the inverter is filtered to reduce the harmonics to an acceptable level (less than 5%). MPPT shall be microprocessor/micro controller based to minimize power losses and maximize energy utilization. The efficiency of MPPT shall not be less than 90% and shall be designed to meet the solar PV Array capacity.

5.6 AC /DC Cables

We use DC & AC cables of Lap, Apar, Polycab, Havels, Finolex or equivalent make to ensure minimum losses in transmission.

In order to complete the energy study that leads to the construction of a photovoltaic installation, hourly series of global horizontal irradiation values for a complete year are used, which resume the irradiation and other meteorological parameters behavior over a long term. We use PV. SYST. Software to workout optimum power production at site with minimum loses.

5.7 Grounding and Lighting Protection

- A protective earth (PE) connection ensures that all exposed conductive surfaces are at the same electrical potential as the surface of the Earth, to avoid the risk of electrical shock. It ensures that in the case of an insulation fault (a "short circuit"), a very high current flows, which will trigger an over current protection device as fuses and circuit breakers that disconnects the power supply.
- A functional earth connection serves a purpose other than providing protection against electrical shock. In contrast to a protective earth connection, a functional earth connection may carry a current during the normal operation of a device.
- Lightning protection is a very specialized form of grounding used in an attempt to divert the huge currents from lightning strikes. A ground conductor on a lightning arrester system is used to dissipate the strike into the earth.
- Lightning ground conductors must carry heavy currents for a short period of time. To limit inductance and the resulting voltage due to the fast pulse nature of lightning currents, lightning ground conductors may be wide flat strips of metal, usually run as directly as possible to electrodes in contact with the earth.
- ➤ In proposal, the entire system is fully provided with the required lighting and grounding protection.

6) Solar PV Location

Details of Building:

Average Unit Consumption / year of Buildings is **38567 Units** (Ref. 12 months Electricity Bills)

Area		Length (ft)	Width (ft)	Area (Sq ft)	SOLAR PV CAPACITY (kW)
Office Building	Area 1	100	25	2500	31.25
Arts & Commerce Faculty	Area 1	60	30	1800	22.50
Building	Area 2	60	30	1800	22.50
	Area 1	50	25	1250	15.63
Home Science Department	Area 2	40	25	1000	12.50
	Area 1	60	15	900	11.25
Girls Hostel	Area 2	60	15	900	11.25
GINS HOSTER	Area 3	30	15	450	5.63
	Area 4	30	15	450	5.63
Library	Area 1	60	40	2400	30.00
	TOTAL				168.13

Total Available Area = 13450 Sq. Ft. & As per available shadow free Area maximum 168 KW Plant can be installed on buildings as per details mentioned in above table.

7) Capacity Evaluation

Calculation for Required Solar Capacity plant to fulfill In-house Requirement

	Calculation to Fulfill Building Total Load Requirement			
Sr. No.	Details	Value	Unit	
1	Average electrical consumption per year	38567	KWh	
2	Units generated per day per KWp 4.50 KWh/KWp/day			
3	3 Units generated per Year per KWp (330 days / Year) 1485 KWh/KWp/Year			
4	Solar KW capacity For 38567 KWh consumption / year	26	КѠҏ	

As per electrical consumption (Building Load), capacity of Solar Power Plant required is 26 KWp. As per shadow free space available on building maximum 136 KWp plant can be installed which is more than the actual requirement of full Electrical Load.

It is suggested to install Solar Plant of Capacity 26 KWp, which can be installed on building itself & it covers all required load.

The SPV power plant with proposed capacity of 26 KWp would be connected to the main electrical distribution panel. The system would meet full load requirement of the connected load during the day. Advance control mechanism in the Power Conditioning Unit will ensure that the maximum power generated by PV modules will be utilized first and the balance requirement of power will be met by either grid or DG set

The 26 KWp SPV Power Plant is estimated to afford annual energy feed of 38567 KWh/year (After considering all losses) considering efficiency of the solar module as 15.16%, Power Conditioning Unit (PCU) efficiency as 98.3% and losses in the DC and AC system as 3%.

Details	Value	Unit
Shadow free space required for approx. 1 KWp Solar Plant	80	Sq.Ft
Shadow free space available at Facility	13450	Sq.Ft.
Solar Plant capacity to be Installed at Facility	168.13	KWp
Solar Plant Requirement as per actual consumption	26	KWp
Installation Cost Per KW for 1 KWp Solar Plant	0.57	Rs. In Lakh
Gross Estimated System cost (For 26 KWp Grid Connected Solar Plant)	15	Rs. In Lakh
Unit generated per day per kWp	4.5	KWh
Electricity generation per day for 26 KWp Grid Connected Solar Plant	117	KWh/day
Electricity generation per year for 26 KWp Grid Connected Solar Plant (330 days/year)	38567	KWh/year
Average Electricity Unit Cost	5.6	Rs./KWh
Electricity cost saved per year	2.16	Rs. In Lakh
Simple payback period	6.85	Years

8) Budgetary Estimation of the Project

7. LIST OF INSTRUMENTS

POWER ANALYSER

Picture 1 ALM 20 Power Analyser

ALM 20 Power Analyser is designed for Measuring power network parameters

Number of channels	3U/3I	
Voltage (TRMS AC + DC)	100V to 2000V ph-ph /50V to 1000V ph-N	
Voltage ratio	Up to 650 kV	
Current (TRMS AC + DC)	5mA to 10,000 Aac / 50 mA to 5,000 Adc (depending on	
	Clamp)	
Current ratio	Up to 25 kA	
Frequency	42.5 - 69 Hz, 340 - 460Hz	
Power values	W, VA, VAr, VAD, PF, DPF, cos ø, tanø	
Energy values	Wh, VAh, VArh	
Harmonics, THD	on V, U, I & In up to 50th order	
Electrical safety	IEC 61010, 1000V CAT III / 600V CAT IV	
Protection	IP54	

DIGITAL CLAMP METER

Picture 2 MECO 3150 DIGITAL CLAMP METER

Power Clamp meter is a Portable Digital multi-functional measuring instrument. Designed for Measuring selected power network parameters, AC/DC Voltage, AC/DC current, Resistance, Continuity, Diode and Frequency.

DC VOLTAGE (Auto Ranging)			
Ranges	4V, 40V, 400V, 1000V		
Overload Protection	1200V DC/800V AC		
AC VOLTAGE (Auto Ranging) 40-500Hz			
Range	4V, 40V, 400V, 750V		
Overload Protection	1200V DC/800V AC		
RESISTANCE (Auto Ranging)			
Range	400Ω, 4ΚΩ, 40ΚΩ, 400ΚΩ, 4ΜΩ, 40ΜΩ		
Test Current	0.7mA on 400 Ω , 0.1mA on 4K Ω		
Diode Test			
Measurement Current	1.0 ± 0.6 mA Approx		
Open Circuit Voltage	0.4V Approx		
Overload Protection	500V DC / AC		
Frequency (Auto Ranging)			
Panao	10.00Hz, 50.00Hz, 500.0Hz, 5.000kHz,		
Range	50.00kHz, 500.0kHz		
Sensitivity	3V		
Overvoltage Protection	200V DC or AC peak		

DIGITAL CLAMP METER

Picture 3 RISH POWER CLAMP 1000 A/400 A AC-DC

Power Clamp meter is a Portable Digital multi-functional measuring instrument. Designed for Measuring selected power network parameters, AC/DC Voltage, AC/DC current, Resistance, Continuity, Diode and Frequency.

Continuity	Below 40 Ohm

INFRARED THERMOMETER

Picture 4 HTC IRX 64 Infrared thermometer

HTC IRX 64 infrared thermometer is useful instrument to measure the surface temperature. Infrared thermometers are ideal for taking temperatures need to be tested from a distance. They provide accurate temperatures without ever having to touch the object you're measuring (and even if your subject is in motion).

Specification	Range
IR	-50°C~1050 °C
Contact	-50°C∼1370 °C
IR Temp. Resolution	0.1°C
Basic Accuracy	+/- 1.5% of reading
Emissivity	Adjustable 0.10 ~ 1.0
Optical resolution	30:1

LUX METER

Picture 5 Nishant NE 1010 Lux meter

Nishant NE 1010 Lux meter is used to measure the lux levels.

TECHNICAL SPECIFICATIONS

	1
Measuring range	0 Lux ~200, 000 Lux/0 Fc~185, 806 Fc
Accuracy	± 3% rdg ± 0.5% f.s.(<10,000 Lux)
